Paperbase is your primary resource for technical and research information about the forest industry. As an industry specific, high quality database, it helps you to minimise your efforts to find the relevant information you need for your work or study. With the easy-to-use Paperbase you can optimise your search to find the content that has real meaning for you. At the same time, you minimise the risk of missing something important. By strengthening your performance, you create value for your organisation and your customers.

Paperbase contains
- over 250,000 citations
- international data from 1975
- material compiled by industry experts
- hundreds of international journals covered

The expert team behind Paperbase follows all the most relevant international scientific, technical and business journals as well as major international conference papers and scientific publications. Paperbase covers the industries dealing with pulp, paper and nonwovens from raw materials to finished products. Recycling and environmental matters are included as well as the most important market news. Also, innovations in the fields of new biomaterials, nanofibres and biorefining are being followed.

Topics include
- Coating and other treatments
- Energy
- Environment
- Market and company news
- Pulping and bleaching
- Paper and nonwoven production and processes
- Raw materials
- Nanocellulose
- Biorefining
- New materials

Prices and subscription
Annual database subscription from 3,500 €

Alerts are also available. Subscriptions and more information at Paperbase.org or contact your Paperbase partner mentioned below.

Partners
Paperbase international is a joint venture and partnership of the world’s leading pulp and paper research institutes: CTP in France and Innventia in Sweden. They have united their expertise and experience in creating Paperbase.
